# ICT JUSAD

SWING STRATEGY

1. Identify the Opening: Mark the opening of the New York midnight session, which starts at 12 AM, indicating the beginning of the new trading day.
2. Mark Highs and Lows: Identify and mark the high and low points of the Asian session.
3. Monitor the London Session: As the London session begins, watch for a sweep of liquidity from either the buy side or the sell side.
4. Confirm Liquidity Sweep: Once a liquidity sweep is confirmed, wait for a market structure shift (MSS) with displacement, which is characterized by a strong price movement in the opposite direction of the liquidity sweep.

5.Identify Entry Points: After confirming the MSS with displacement, switch to a 3-minute or 1-minute time frame. Wait for the price to return to an institutional reference point, such as a Fair Value Gap (FVG), an Order Block, or a Breaker Block.
